

QPR EnterpriseArchitect

Align IT with Business!

Align Business and IT with QPR EnterpriseArchitect!

Many organizations struggle with managing the scope of their Enterprise Architecture, which makes it difficult to obtain a holistic view of IT, operations and the effects related to changes in strategy, mergers, acquisitions, outsourcing or even the replacement of a single IT system.

With QPR EnterpriseArchitect your team

obtains an all-inclusive, multi-user environment for managing the artifacts needed to accurately make specifications in all EA domains and for performing effective gap analysis.

QPR EnterpriseArchitect interlinks the architecture domains with each other, which enables users to conveniently identify how a change has an effect on

other domains, and accurately assess the business-criticality of proposed IT investments.

QPR EnterpriseArchitect offers a fully open metamodel, which supports any standard and framework (TOGAF, Zachman, ArchiMate, UML, IDEF, BPMN) and offers the ability to tailor each to your way of working.

QPR EnterpriseArchitect offers all the stakeholders involved in your Enterprise Architecture Management (EA) program a single design environment that covers your business processes, your business architecture, your applications, your data and your systems. A completely open metamodel permits your team a flexible approach to EA and supports them in applying any of the available frameworks and standards as well as customized approaches. QPR provides all the capabilities needed for efficient design, analysis and planning work with unmatched usability. It ensures your EA initiative will benefit from the active participation of all stakeholders, from business users to IT specialists.

With QPR EnterpriseArchitect You Can:

- ▶ Manage all EA domains in one tool
- ▶ Analyze assets, relationships and dependencies
- ▶ Tailor the EA method to your needs
- ▶ Perform effective gap analysis
- ▶ Manage development in a controlled manner
- ▶ Integrate external information
- ▶ Publish and share your artifacts instantly online
- ▶ Available in 26 languages!

"Complete support for our framework in a centralized, multi-user modeling repository combined with the ArchiMate notation make the QPR solution an efficient tool for managing our enterprise architecture."

Pasi Perämäki, Chief Information Officer, City of Lohja

The management of your Enterprise Architecture needs to be a business-driven initiative in order to demonstrate its value to top management. Yet notations like UML, BPMN and ArchiMate are far from the perceptions of business users. In addition to its architecture-focused diagram, catalog and matrix-based modeling capabilities, QPR EnterpriseArchitect offers powerful process modeling functionality to help gain active participation from business users and provide up-to-date insight in the design of the business processes that shape your operations and business architecture.

QPR EnterpriseArchitect does not limit itself to capturing of process and architecture diagrams, catalogs and matrices. Also procedural, policy and training documentation, message specifications (e.g. EDIFACT) or any other content stored on local networks, document management systems or the web can be linked with diagram, catalog or matrix objects and made easily available to users through a single point of access. That, combined with the rich, web-form based collaboration capabilities for commenting, sharing ideas, assigning tasks and monitoring progress, means that your team obtains a single platform for managing your Enterprise Architecture in a most effective manner. Users can furthermore report, share and publish information in various formats and tools (Dynamic HTML, PDF, Microsoft Word, Excel and PowerPoint).
