

## QPR ProcessDesigner Improve Process Awareness!

QPR ProcessDesigner offers your organization a powerful solution to describe, analyze, communicate and improve your processes. QPR ProcessDesigner is uniquely focused on business users, founded on the premise that effective process management is impossible without their active participation.

QPR ProcessDesigner offers support for multiple process-oriented management initiatives and methods, such as quality management (ISO9000, LEAN, Six Sigma, EFQM), regulatory compliance (SOX, Basel II, Solvency II), Business Process Analysis and Business Activity Monitoring.

### With QPR ProcessDesigner You Can

- ▶ Design and maintain process models efficiently
- ▶ Analyze model assets and relationships
- ▶ Integrate your existing documentation
- ▶ Analyze resource usage and allocation
- ▶ Publish process models instantly online and into Microsoft® Office products
- ▶ Fix problems with powerful online collaboration
  
- ▶ Available in 26 languages!

## Process Management Software QPR ProcessDesigner

Process Management Software QPR ProcessDesigner provides your organization with an all-inclusive multi-user environment to describe, analyze, communicate and improve your processes. QPR ProcessDesigner is unique in delivering powerful process management capabilities while remaining as easy to use as the office productivity tools that business users work with daily. This makes it the perfect choice for organizations that want process

improvement to be a business-driven, ongoing initiative rather than a one-off IT exercise.

QPR ProcessDesigner captures process information as a model, rather than a collection of diagrams. This makes maintenance work significantly more efficient and allows each stakeholder to view and analyze the model from a viewpoint that most applies to their role.

Your quality manager for example will be interested in different aspects of your processes than your IT manager or Risk manager.

The model-based approach also enables centrally managing the available model assets such as teams, IT systems and documents, as well as the notation used to describe your processes, to ensure a consistent process model.

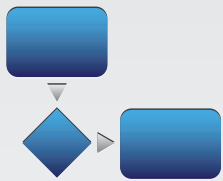

# “QPR makes process development and achieving customer orientation extremely easy”

Riku Kolhonen, Quality Manager at SKANSKA Residential Constructions

QPR ProcessDesigner process management software easily integrates with your available document management system, such as for example Microsoft SharePoint, in order to offer users of process information a single point of access to all documents and instructions related to the task at hand. Additional content in file systems, on the web or on local networks can also be added easily, simply by dragging it onto the desired location on the process maps. The content is then automatically linked or embedded to your process documentation.

The process model described with QPR ProcessDesigner is automatically published in dynamic HTML format to the QPR Portal that most users in your organization will use to access and analyze information. From there information can be published by users to Microsoft Word, Excel and PowerPoint, as well as PDF, XML, XAML and ebXML formats.

Many process-oriented management initiatives (like quality management systems, risk and regulatory compliance, EFQM and Malcolm Baldrige) require your organization to formalize improvement procedures such as risk assessments, corrective and preventive actions and control activities. QPR Portal offers users powerful collaboration activities based on web forms, allowing them to report incidents, add comments and share ideas. Managers then can apply these web forms to assign tasks and monitor follow-up. The execution of web form-based actions can also be automated with support for Microsoft Windows Workflow Foundation.

## QPR ProcessDesigner Improve Process Awareness!
